(light lunch from 12:30 to 12:45 p.m.)

Venue

ACC209
2/F, Jockey Club Academic
Community Centre,
Baptist University Road Campus

Abstract

The convergence and aggregation of various technologies have created a new era. Some have named it Industry 4.0 or the 4th Industrial Revolution. At the same time, industry and businesses have noted a disconnect between the kind of students and graduates being produced by education for employment and their expectations of graduate competencies. Simultaneously, we hear of the digital engagement divide of fresh graduates who quit very quickly, their new employers operating jurassic environments. The presentation will attempt to paint a rendition of this landscape, and review some of many roles of higher education. It will explore the student learning experience, and how it can make it relevant, purposeful and useful, so that students can be future aware, future ready and hopefully, future-proof.

Biography

Dr Daniel Tan is currently the Group Chief Learning Officer at the Taylor's Education Group, Malaysia. Dr Tan has over 26 years of experience in teaching, eLearning architecture, design and policy making. He has a strong understanding and substantial hands-on experience at the integration and synergy of education technology and content for effective outcomes. His technical interests cover educational technology and infrastructure design, learning science, Internet and ICT security, cloud technologies, human factors design and usability. Prior to joining Taylor's, Dr Tan has held senior academic leadership roles in Nanyang Technological University, Singapore.

Dr Tan received the 2012 Global e-Learning Award for Excellence in eLearning at the 2012 LearnTech Conference in recognition of his leadership and contribution to the field of Education. He has frequently been invited to speak as a keynote speaker at various international events.
